

Breathe Easy with the Pros

Your home should be a **sanctuary of comfort** — the one place you can breathe easy. Today there's a growing interest in healthy living. But what about the air that we breathe? According to the Environmental Protection Agency, indoor air can be two to five times more polluted than outdoor air. Are you aware of the steps you can take to improve the quality of air in your home? House Pro can help you breathe easier with...

TOTAL INDOOR AIR QUALITY

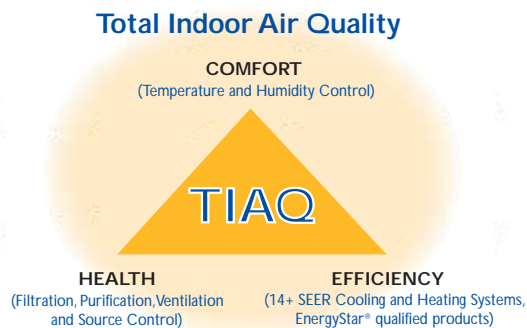

We install quality American Standard equipment for greater humidity control.

American Standard
NEW STANDARDS FOR LIVING™

TACLB015682E

Since many of us suffer from allergies, asthma and sensitivity to mold and dust, House Pro created **TIAQ**, a Total Indoor Air Quality program — one that focuses on three key elements: **COMFORT**, **HEALTH** and **EFFICIENCY**.

If any of these variables are not in place, your air quality will suffer. Sometimes even a small improvement makes a big difference. Better filters can remove dust and pollen from your home. Installation of a UV Germicidal Light will kill mold, algae, bacteria and viruses both in the air and on the surface of your evaporator coil (a dirty coil can be a breeding ground for mold and algae). Adjusting humidity levels makes you more comfortable and reduces upper respiratory problems. And that's just the beginning.

To find out what you can do to improve the quality of air in your home call House Pro for an Indoor Air Quality Analysis — **Only \$29.95**

Our 7-point Indoor Air Quality Analysis checks...

1. Relative humidity levels (Humidity in home should be less than 60%)
2. Type and condition of filtration system
3. Supply ductwork for leaks and proper air flow
4. Evaporator coil for biological contamination
5. Fresh air ventilation systems
6. Return air ductwork for leaks and proper sizing
7. Level of carbon monoxide in the home
