Breathe Easy with the Pros

Avoid getting caught in the heat! Get a **House Pro 22-point spring air conditioning performance inspection**. You'll know exactly what's working and what's not — before the mercury hits 90.

On average, Houston temperatures linger above 90 for nearly three months each year. With humidity, it feels like 110! If your air conditioner has **NOT** been properly maintained, you're sure to develop problems exactly when you need it most.

During the heat of the summer, seemingly minor problems can escalate. Improperly maintained condensate drain lines can cause serious water damage. Dirty coils can overwork your fan motor and compressor causing premature failures. With proper maintenance, you can avoid these costly repairs. Plus, you'll save money on energy bills.

Seasonal inspections keep your heating and cooling equipment running efficiently — without interruption. A House Pro maintenance inspection looks at every mechanical component, giving you peace of mind all summer long. **And if you schedule your appointment now. We'll include a free condenser coil cleaning, a \$95.00 value.**

*To keep your cool this summer,
